PROFESSIONAL SUMMARY

Site Reliability Engineer with 4.5 years of experience specializing in **Immutable Infrastructure** and automated DevOps lifecycles. Expert in architecting high-scale distributed systems on AWS using **Terraform** and **Kubernetes**. Proven track record in maintaining **99.9% availability**, executing complex PCF to EKS transitions, and delivering high-level resilience insights through advanced observability feedback loops.

CORE TECHNICAL EXPERTISE

Cloud & Orchestration: AWS (EKS, TGW, Route53, S3), Kubernetes (Kudos), Docker, PCF, Helm.

Infrastructure as Code: Terraform (Advanced), CloudFormation, YAML, Bash, Python.

Observability & Feedback: New Relic, Splunk, Prometheus, Grafana, CloudWatch, ELK Stack.

CI/CD & IAM: GitLab CI, Jenkins, Bamboo, Microsoft Entra ID, OAuth 2.0, SonarQube, Artifactory.

PROFESSIONAL EXPERIENCE

Site Reliability Engineer / Technology Analyst

Oct 2023 – Present

Infosys (Client: Telstra)

- **End-to-End CI/CD Integration:** Orchestrated the transition from Bamboo to **GitLab CI**, interlinking **SonarQube** for automated quality gates and **Artifactory** for binary management, reducing deployment failures by **30%**.
- **OKPAI & OGW Entra Migration:** Spearheaded the migration of authentication frameworks to **Microsoft Entra ID**, reducing latency by **20%** and securing **50+ microservices** via OAuth 2.0 protocols.
- **Infrastructure-as-Code (IaC) Lifecycle:** Leveraged **Terraform** for full-stack provisioning of EKS clusters while utilizing **Helm** for application packaging, ensuring 100% environment parity and eliminating configuration drift.
- **Observability Feedback Loop:** Engineered custom **Splunk** and **New Relic** dashboards for weekly **InOps** sessions, translating raw metrics into actionable KPIs that reduced **MTTR by 45%**.
- **EKS Modernization:** Architected the transition of 15+ mission-critical API services from PCF to AWS EKS, boosting scalability by **40%** and optimizing compute costs by **15%**.
- **Self-Healing Systems:** Integrated automated health checks and auto-scaling within Terraform-managed VPCs to guarantee **99.99% infrastructure uptime**.

Site Reliability Engineer

Mar 2021 – Sep 2023

Infosys

- **Operational Excellence & Release Ops:** Automated Blue-Green and Canary release strategies for production, ensuring **zero-downtime** updates and reducing production incidents by **30%**.
- **Incident Response & Reliability:** Spearheaded Root Cause Analysis (RCA) for Tier-1 incidents and leveraged **Splunk** for proactive threshold-based alerting to maintain system resilience.
- **Security Automation:** Programmed automated SSL certificate renewal via AWS Certificate Manager, removing manual renewal risks and identifying **10+ potential expiration blockers**.
- **Availability Management:** Sustained high-availability environments for Order Status Tracker services, overseeing SQS/SNS durability for **1M+ daily transactions**.

KEY PROJECTS & CONTRIBUTIONS

- **Disaster Recovery (DR) Automation:** Designed a Terraform-based DR framework that automated the replication of EKS workloads across multiple AWS regions, achieving an **RTO of less than 30 minutes**.
- **Cost Optimization Initiative:** Implemented automated resource tagging and lifecycle policies for S3 and EBS volumes, reducing monthly cloud expenditure by **\$2,000+** through orphaned resource cleanup.

EDUCATION & CERTIFICATIONS

Education: B.Tech in Mechanical Engineering (CGPA: 8.0) | JNTU, Kakinada | 2017 – 2021

Certifications: AWS Certified Cloud Practitioner | Microsoft Azure Fundamentals
